

## PA28

### Inline Preamp for Dynamic and Passive Ribbon Microphones

- Adds +28dB of clean gain to low-output microphones for proper gain staging
- Compact design connects directly to your microphone's output - no need for bulky hardware
- Low impedance provides clean signal - even with extended length cable runs
- Buffered to ensure consistent gain levels regardless of load
- All metal construction for reliable performance in even the most demanding conditions

Lift your sound with the CAD Audio PA28. The PA28 is a robust, compact inline preamp for dynamic and ribbon microphones, providing +28dB of clean, consistent gain between your microphone and the mixer.

The PA28 is ideal for inherently low-output dynamic microphones - including broadcast/podcast mics, live performance mics, and even delicate ribbon mics.
